

ClearSilk™

Address Minor Skin Imperfections and Boost Skin Revitalization. Non-Ablative. NO Downtime.

The ClearSilk™ treatment works by deposition of heat into micro vessels. This heat increases the temperature of the blood that is flowing through the micro vessels stimulating fibroblast activity and the body's natural repair process resulting in a decrease in fine lines and wrinkles.

Technology

Built-in Temperature Sensing

Easily visualize skin temperature as you are treating with the built-in sensing gauge that indicates temperature ranges between 32-48 °C.

Audible Feedback

The ClearSilk handpiece and JOULE system deliver audible energy alarms to provide real time feedback on number of pulses delivered.

Visual Distance Guide

Enable user to maintain consistent treatment distance to target for uniform heating to ensure reliable results.

Benefits

- All Fitzpatrick skin types
- Easily delegatable
- Zero downtime
- 4-6 treatments recommended for optimal results
- No anesthetic required
- Comfortable, minimal patient discomfort
- Combine with other Sciton modalities to offer best-in-class treatments
- Non-ablative, non-contact
- No disposables

Indications

- Fine lines and wrinkles
- Pigmented lesions
- Diffuse redness
- Rosacea
- Improved luminosity
- Acne scars
- Skin revitalization
